

- 1.Created 4 java files: WebDriverLaunch.java, BaseTest.java, AdminPage.java and Login.java.
- 2.In WebDriverLaunch class, Set the preconditions for running the test case and initialized the browser with the use of @BeforeSuite, @BeforeMethod and @AfterSuite testing annotations.
- 3.In Login class, wrote the code for login to the site using the provided credentials.
- 4.In AdminPage class,using the pagefactory performed all the steps of adding a user and confirmation regarding the same.
- 5.In BaseTest class,we inherit WebDriverLaunch class and passed all the credentials for login to the website.Also passed all the required data for the AdminPage class to process the addition of a new user.
- 6.Properties file stores the login credentials and also Adminpage's data which is required.
- 7.In Drivers folder,chromedriver is kept.

## **Before Adding User:**

The screenshot shows the 'easyordering' application interface. The top navigation bar includes the logo and a 'Logout' button. The left sidebar contains a menu with categories like Dashboard, Catalog, Sales, Customers, Marketing, System, and Reports. The 'System' category is expanded, showing sub-items: Settings, Users, Shipping, Order Statuses, Weight Class, Returns, and Manage Backup. The main content area is titled 'Users' and features a 'User List' table. The table has columns for #, Username, Status, Date Added, and Action. There are 3 entries listed. Below the table, there are pagination controls showing 'Previous', '1', and 'Next'.

#	Username	Status	Date Added	Action
1	admin	Enabled	2018-05-29 00:00:00	Action ▾
2	demouser	Enabled	2018-12-10 18:10:31	Action ▾
3	test01@gmail.com	Enabled	2018-12-17 21:11:27	Action ▾

## **After Adding User:**

Chrome is being controlled by automated test software.
